FOREWORD

The Missouri Division of Alcohol and Drug Abuse is pleased to present this Twelfth Edition of the *Status Report on Missouri's Alcohol and Drug Abuse Problems*. This annual report provides data tables and charts to illustrate the consequences of alcohol and drug abuse in Missouri. Recently-released data compares rates of substance use, abuse, and dependence in Missouri and the United States for adolescents, young adults, and older adults. Significant trends are also highlighted and summarized.

The Division of Alcohol and Drug Abuse has contracts with substance abuse programs to provide publicly supported prevention and treatment services for thousands of Missourians each year. This report includes data quantifying and summarizing those services. Additional information regarding treatment and prevention services is available from the Division's district offices located in Kansas City, St. Louis, and Jefferson City, and the satellite offices in Springfield and Rolla. The addresses and phone numbers for those offices are shown on the map in the appendix.

Inquiries and comments pertaining to the Status Report should be directed to the Division's Research and Statistics unit. The 2002-2006 editions are accessible on the Division's website at:

<http://www.dmh.missouri.gov/ada/rpts/status.htm>

Sincerely,

A handwritten signature in cursive script, reading "Michael Couty", is located below the word "Sincerely,".

Michael Couty

ACKNOWLEDGMENTS

The Missouri Division of Alcohol and Drug Abuse would like to recognize administrators and analysts from other agencies who contributed to this Twelfth Edition. The Division is grateful for their assistance in providing the data and information presented in this report.

INTRODUCTION

The *Status Report on Missouri's Alcohol and Drug Abuse Problems* is issued annually by the Missouri Department of Mental Health, Division of Alcohol and Drug Abuse. The report provides consistent measures on the consumption of alcohol, tobacco, and other drugs and the consequences of substance abuse. It also quantifies the clinical services provided by the treatment programs through contracts with the Division of Alcohol and Drug Abuse (ADA). Policy makers, planners, researchers, educators, and other interested individuals are encouraged to utilize this report.

Data are provided at several geographic levels. Tables and charts show Missouri trends for the most current year available and several prior years. Survey data tables compare national and Missouri rates of alcohol, tobacco, and illicit drug use for specific age groups. Alcohol and drug abuse consequences and treatment data are provided in multi-year tables for statewide Missouri and three-year tables for the ADA planning regions and service areas. These geographic units are illustrated on the map in the Appendix of this report. Three-year tables are also provided for Missouri's 114 counties and the city of St. Louis, arranged according to federal FIPS county code. In all of the tables, a data element represents a calendar year unless specified as "FY" for state fiscal year (July 1 through June 30) or "FFY" for federal fiscal year (October 1 through September 30). Throughout the report, numerals enclosed in brackets [] in the narratives, charts, and tables correspond to the references listed in the Appendix.

The consequences identified in this report include recorded events directly resulting from alcohol and other drug abuse. Some of the problems that have a correlation to substance abuse are also included—such as dropping out of school, unemployment, crime, and violence. Typically the data are recorded by local authorities and reported to state agencies. Arrests and traffic crashes are among events geographically indexed according to their county of occurrence. Others are summarized from person-centered reports based on county of residence. The ADA treatment admissions data in this report are indexed according to county of residence rather than treatment location.

The reader should avoid comparing treatment admissions data in this report with data from previous reports. Due to changes in treatment practice and terminology, this report classifies programs in eight types (Adolescent CSTAR, Women and Children CSTAR, General Population CSTAR, Primary Recovery Detoxification, Primary Recovery Treatment, Opioid Treatment, Clinical SATOP, and Other Substance Abuse Treatment) that differ from the categories used in previous reports. Admissions data from past years have been cross-walked to these new categories to provide data comparability between fiscal years within tables. Some clients need more than one type of treatment and have admissions in more than one program category. To reflect all categories equally, clients are counted once—or unduplicated—for each program category in which they have a treatment admission during a fiscal year.

Federal and state laws and regulations restrict youth access to tobacco products. One section of the report summarizes Missouri's tobacco regulations, merchant education, retail law compliance, and youth tobacco use. Trend data illustrates the significant progress Missouri has made during the past ten years in discouraging and reducing the sale of cigarettes to minors at retail outlets.

SOCIETAL COSTS OF SUBSTANCE ABUSE

The economic costs of alcohol abuse in the United States were estimated to be \$184.6 billion annually in 1998 and were increasing at a rate of 3.8 percent per year [51]. Productivity losses accounted for more than two-thirds of these costs, including 47 percent for alcohol related illnesses, 20 percent for premature deaths, and five percent for alcohol related crime. Other major cost components were 14 percent for alcohol related health care expenditures and 13 percent for property damage. Missouri's portion of the 1998 cost was at least \$3.7 billion.

Projected costs to society of drug abuse were \$160.7 billion in 2000 [57], and Missouri's share was an estimated \$3.2 billion. As with alcohol abuse, productivity losses comprised almost 70 percent of these costs, including 40 percent for the perpetrators and victims of crime, 16 percent for drug related illnesses, and 14 percent for premature deaths. Other crime-related losses, including goods and services, accounted for 22 percent of the societal costs, and health care expenditures totaled nine percent.

The estimated societal costs of cigarette smoking in the United States were \$167 billion per year during the period 1997-2001. Productivity losses due to premature deaths accounted for 55 percent of these costs, and 45 percent were smoking related health care expenditures [47]. Missouri's estimated annual costs were \$3.94 billion, including \$2.27 billion in lost productivity and \$1.67 billion in health care and related expenditures [48]. These estimates yield Missouri per capita costs of \$704 per year, somewhat higher than the nation-wide cost burden of \$593 per person.

CONSUMPTION DATA

A small number of widely-used surveys collect national and state data on alcohol, tobacco, and other drug use. Some of these include questions which indicate alcohol or drug dependence, high-risk behaviors, and the need for treatment or intervention services. Surveys are used to estimate prevalence—the percentage and number of people using alcohol and other drugs within a population. However, most surveys rely on a subset to represent a population and therefore are subject to sampling error. The Missouri estimates, in particular, from the national surveys should be interpreted with caution due to relatively small sample sizes.

National Survey on Drug Use and Health

The National Survey on Drug Use and Health (NSDUH) uses a sampling methodology that provides national and state data on alcohol, illicit drugs and tobacco [54]. The survey collects information on past month (current), past-year, and lifetime use of these substances. It also probes attitudes toward substance use, problems experienced by users, and efforts to receive substance abuse treatment. Analysis yields estimates of alcohol and drug abuse, dependence, and unmet treatment need. The table on page 36 provides national trends in current and lifetime drug use for adolescents and adults age 12 and older, and page 37 provides these rates for specific age groups. The table on page 38 compares national and Missouri rates of current and past-year use of several drugs, alcohol and drug problems, and beliefs regarding the risk associated with drug use, while the table on page 39 converts the Missouri rates into population estimates [53, 55]. Data from years 2003 and 2004 are combined to increase sample sizes and improve estimates. Some of the NSDUH results and projections are discussed below and in other sections of the report.

Alcohol: Among adolescents and adults, Missouri's estimated percentage of current drinkers decreased from 53.2 percent in the combined 2002/2003 samples to 49.8 percent in 2003/2004—a reduction that is statistically significant. This percentage is very close to the

2003/2004 U.S. rate of 50.2 percent. Binge alcohol use—defined in the NSDUH as consuming at least five drinks on a single drinking occasion at least once in the preceding 30 days—increased slightly in Missouri from 24.6 percent in 2002/2003 to 25.1 percent in 2003/2004. This rate is higher than the national binge drinking rate of 22.7 percent. Among adolescents 12-17 years of age, current alcohol use in Missouri was 20.2 percent in 2003/2004, not significantly higher (statistically) than the 19.7 percent rate in 2002/2003. Nationally, however, current use was reported by only 17.6 percent of that age group in 2003/2004. Among Missouri adolescents, binge drinking was 12.6 percent in 2002/2003 and 13.7 percent in 2003/2004, compared to the U.S. rate of 10.9 percent in 2003/2004. Current alcohol use among young adults 18-25 years of age had no significant change between the pairs of years although, at 63.8 percent, Missouri's rate was somewhat higher than the national rate of 60.9 percent for that age group. Binge alcohol use among young adults in Missouri reached 45.2 percent in 2003/2004, higher than the rate of 43.9 percent posted in 2002/2003 and 3.8 percentage points higher than the 2003/2004 national rate of 41.4 percent for the age group of 18-25 years. Missouri's population age 26 and older had a significant reduction in current use of alcohol, dropping from 55.8 percent in 2002/2003 to 51.4 percent in 2003/2004—lower than the U.S. rate of 52.8 percent for this adult age group. Binge drinking among adults at least 26 years of age was 23.1 percent in Missouri in 2003/2004, compared to 21.0 percent nationally. For many years, research has recognized that favorable attitudes toward alcohol and other drug use contribute to abuse and dependence. While 41.3 percent of the U.S. population 12 years of age and older perceives great risk in binge drinking once or twice a week, only 38.1 percent of the Missouri population perceives that risk.

Illicit Drugs: Missouri's rate of past month (current) use of any illicit drug among the population 12 years of age and older was virtually the same as the U.S. rate at 8.1 percent in 2003/2004. At 6.4 percent current use in Missouri, marijuana accounted for most of that figure. Nationally, 6.1 percent of adolescents and adults were current marijuana users in 2003/2004. Past month illicit drug use among Missouri adolescents 12-17 years of age was 11.0 percent in 2003/2004, approximately the same as the national rate. Current marijuana use among this population was 8.2 percent, compared to the U.S. rate of 7.7 percent. Among young adults 18-25 years of age, Missouri's use of illicit drugs was 18.9 percent—almost one percentage point lower than the national rate. Missouri's rate for current use of marijuana in this age group was 16.5 percent in 2003/2004, almost matching the U.S. rate of 16.6 percent. In the adult age group of 26 and older, Missouri's past month use of illicit drugs was 5.8 percent in 2003/2004 compared to 5.6 percent in the United States. Marijuana use was also higher in Missouri than nationally with a current use rate of 4.3—not significantly different than the State's rate of 4.6 percent for this age group in 2002/2003. Increasing percentages believe there is great risk in smoking marijuana once a month. In 2003/2004, 38.2 percent of the Missouri population 12 years of age and older perceived marijuana smoking as a risk, compared to 36.7 percent in 2002/2003. Missouri's increase was greatest for the population older than 26 years of age, with 41.5 percent perceiving great risk in 2003/2004 compared to 39.5 percent in 2002/2003. Despite these increases, Missouri's overall rate was lower (indicating a perception of less risk) than the U.S. rate of 39.7 percent. Missouri's average annual rate of first use of marijuana was 6.9 percent of adolescents 12-17 years of age in 2003/2004, compared to 6.2 percent of adolescents nationwide. Past-year use of cocaine, including crack, was reported by 2.6 percent of Missouri's population 12 years of age and older in 2003/2004, compared to 2.4 percent of the U.S. population. However, this percentage was a decrease from Missouri's 2002/2003 rate of 2.9 percent. Among those 12-17 years of age, 2.0 percent of the Missouri population and 1.7 percent of the U.S. population used cocaine in the year preceding the survey in 2003/2004.

Tobacco: Current use of any tobacco product decreased slightly in each age group in Missouri between the 2002/2003 and 2003/2004 surveys, yet Missouri's overall rate remained 6.6 percentage points higher than the national rate in 2003/2004. Cigarette smoking accounted for most of the tobacco use, and 30.6 percent of Missouri's population 12 years of age and older were current cigarette users in 2003/2004, compared to 25.2 percent nationally. While the U.S. posted modest but significant reductions in cigarette use among the 12-17 and 18-25 age groups, Missouri's adolescent and young adult populations continued to have smoking rates at least five percentage points higher than the national rates. In 2003/2004, 17.1 percent of the 12-17 year olds in Missouri—and 45.5 percent of the 18-25 year olds—were current cigarette smokers. Smoking rates for the Missouri population at least 26 years of age were 29.8 percent in 2003/2004, considerably lower than the young adult rate but higher than the U.S. rate of 24.4 percent for that age group. Consistent with the higher Missouri rates, smaller percentages of the population in each age group perceive great risk in smoking one or more packs of cigarettes per day. In 2003/2004, 72.8 percent of the U.S. population 12 years of age and older perceived this risk, compared to 69.4 percent of the Missouri population. Perception of risk was highest—71.0 percent—for Missouri's adult population 26 years of age and older, and lowest—63.0 percent—for the 12-17 age group.

Alcohol and Drug Dependence: The NSDUH also collects data on past-year alcohol and drug problems and mental health problems to quantify the need for treatment services. These data are summarized in the *Treatment Need* section on page 17.

Monitoring the Future Survey

Monitoring The Future (MTF) is an annual survey of students in grades 8, 10, and 12, college students, and young adults 19-28 years of age in the United States [1, 2, 3]. The tables on pages 40-44 provide national trend data from this survey. The trend charts of current alcohol, cigarette, marijuana, and cocaine use on pages 22-24 utilize the MTF survey results for the national data. Missouri subsets of the MTF data are not available, but the Youth Risk Behavior Survey provides comparisons for Missouri on similar survey items and grade levels.

Youth Risk Behavior Survey

The Youth Risk Behavior Survey (YRBS) is administered by the Centers for Disease Control and Prevention (CDC). The survey is conducted nationally and in Missouri to students in high school grades 9-12 every two years [8, 49]. The survey collects data on lifetime and current use of alcohol, tobacco, and illicit drugs, and use of these substances before age 13. The tables on pages 46-47 provide U.S. survey results for selected items for years 1995-2003 and Missouri results for 1995-2005. Due to potentially large sampling errors (particularly for the state data) confidence intervals of the percentage estimates are provided. Although Missouri students' use of alcohol, cigarettes, and marijuana appears to be generally lower—and their use of other drugs higher—in 2005 than in 2003, most of the estimates for the two years have overlapping confidence intervals and thus the differences are not statistically significant. The following discussions of the data are based on the published estimate midpoints without reference to margins of error.

Alcohol: Among Missouri's high school students, current (past 30-day) use of alcohol declined from 49.2 percent in 2003 to 40.8 percent in 2005. Binge drinking in the 30 days preceding the survey was reported by 30.5 percent of the students in 2003 but only 24.9 percent in 2005. Ninth-grade students posted the largest reductions on both of these measures, with current use decreasing from 44.4 percent in 2003 to 30.4 percent in 2005 and binge drinking decreasing from 25.3 percent to 13.6 percent. The percentage of students reporting that they began drinking before age 13 changed very little between 2003 and 2005, but it has declined considerably in the last decade from 39.9 percent in 1995 to 24.2 percent in 2005. National data for 2005 are not yet available

for comparison. In 2003, Missouri's high school students had higher rates of alcohol use and binge drinking than students nationwide.

Tobacco: Cigarette smoking among Missouri high school students decreased between 2003 and 2005. In 2003, Missouri high school students had higher rates than their counterparts in the United States for lifetime (ever) smoking, smoking before age 13, current smoking, and daily smoking for at least one month during their lifetime. Although comparative national data for 2005 are not yet available, 49.6 percent of Missouri students reported in 2005 that they had ever smoked cigarettes, considerably lower than the 63.3 percent in 2003. Students in grade 9 had the most significant reduction—from 60.8 percent in 2003 to 40.7 percent in 2005. Missouri students reporting that they smoked a whole cigarette before age 13 decreased from 20.2 percent in 2003 to 14.8 percent in 2005. Current (past 30-day) smoking was reported by 21.3 percent of Missouri high school students and only 14.1 percent of the ninth graders, compared to 24.8 percent of all students and 25.6 percent of the ninth grade students in 2003. Among the current smokers, 57.7 percent tried to quit smoking during the past 12 months. In 2005, 13.8 percent of the Missouri students reported that they had ever smoked daily for at least one month, compared to 18.1 percent in 2003 and 23.4 percent in 2001. While smoking rates were down in 2005, increases occurred in the use of smokeless tobacco. In 2005, 6.9 percent of high school students reported using chewing tobacco, snuff, or dip within the past month, compared to 5.7 percent in 2003. However, the rate was only 3.6 percent among ninth graders.

Marijuana: Missouri high school students had lower rates of marijuana use in 2005 than in 2003. Current use decreased from 21.8 percent to 18.1 percent, lifetime use decreased from 41.3 percent to 35.0 percent, and the percentage of students who used marijuana before age 13 decreased from 10.0 percent in 2003 to 8.8 percent in 2005. Students in grade 9 had the lowest rate of current marijuana use at 11.7 percent, followed by high school seniors with a rate of 15.5 percent. In 2003 Missouri's current use of marijuana was slightly lower than the national rate of 22.4 in grades 9-12, the lifetime rate was slightly higher than the U.S. rate of 40.2 percent, and the percentage using marijuana before age 13 was virtually the same nationally and in Missouri.

Other Drugs: Although 4.1 percent of high school students in the United States had used cocaine in the past 30 days in 2003, Missouri's rate was lower that year at 2.7 percent and increased to 3.0 percent in 2005. Lifetime cocaine use among Missouri students was 7.4 percent in 2005, compared to 6.6 percent in Missouri and 8.7 percent nationally in 2003. The percentage of Missouri students who ever used cocaine ranged from 3.1 percent among ninth graders to 11.1 percent among students in grade 12. Lifetime methamphetamine use among Missouri high school students was 6.4 percent in 2005, close to the rate of 6.2 percent in 2003. Missouri's largest percentage of students who reported ever using methamphetamine was 10.4 percent in 2001, due mainly to a rate of 14.8 percent that year among high school seniors. In 2005, lifetime inhalant use was 12.2 percent among the Missouri high school population, compared to the 2003 Missouri rate of 10.5 percent and national rate of 12.1 percent. In 2003, lifetime heroin use was 3.3 percent among high school students nationwide but only 1.7 percent among Missouri students. In 2005, 2.7 percent of Missouri's students reported that they had ever used heroin. Needle drug use also increased in Missouri, with 2.3 percent of high school students reporting in 2005 that they had ever injected an illicit drug, compared to 2003 rates of 1.3 percent in Missouri and 3.2 percent in the United States. Lifetime non-prescription steroid use decreased from 4.5 percent in 2003 to 3.5 percent in 2005, compared to a national rate of 6.1 percent in 2003. Although 11.1 percent of high school students nationwide reported in 2003 that they had ever used ecstasy (or MDMA), Missouri had a rate that year of 6.7 percent. In 2005, 6.1 percent of Missouri students had lifetime ecstasy use ranging from 3.8 percent for grade 9 to 8.5 percent for grade 12.

Other Surveys

The Missouri Student Survey is conducted in even-numbered years throughout Missouri for students in grades 6 through 12, with a primary focus on grade 9. The survey became web-based in 2004, and the statewide prevalence rates from that survey are summarized in the table on page 48 [59]. The next survey will be administered in 2006.

The Core Alcohol and Drug Survey, a project supported by Southern Illinois University, was administered to 68,000 undergraduate students at 133 colleges and universities in 2004 [43, 58]. Missouri Partners in Prevention administered the survey on 12 Missouri campuses. The survey measures binge drinking and past-month and past-year use of alcohol, tobacco, and illicit drugs. In 2004, binge alcohol use—consuming five or more drinks at one sitting at least once during the two weeks prior to the survey—was reported by 48.8 percent of the students nationally and 49.9 percent of the Missouri college students. In 2005, Missouri's binge drinking rate decreased to 48.4 percent.

Other Consumption Data

The National Institute on Alcohol Abuse and Alcoholism manages the Alcohol Epidemiologic Data System. Using data on sales of beer, wine, and distilled spirits, the system estimates annual consumption of ethanol (absolute alcohol). In 2003, per capita consumption of alcohol among the Missouri population age 14 and older was 2.26 gallons of ethanol, a decrease from the two-decade record of 2.39 gallons reached in 2002. Missouri's 2003 alcohol consumption was slightly higher than the national average of 2.22 gallons of ethanol [50].

CONSEQUENCES DATA

Health

Prenatal alcohol, tobacco, and drug exposure can cause low birth weight, newborn addiction, serious birth defects, mental retardation, and lifelong impairments. This report includes medical conditions of newborns identified on birth certificates and hospital data on maternal drug exposure using International Classification of Diseases, 9th Revision (ICD-9) coding developed by the World Health Organization. Substance abuse during pregnancy showed no improvement in 2004 [15, 16]. The reported number of mothers of newborns who drank during their pregnancies increased from 464 in 2003 to 472 in 2004, a slight rate increase to 60.7 per 10,000 live births. Studies have shown that alcohol use during pregnancy is substantially underreported, so the number of babies at-risk for fetal alcohol syndrome and fetal alcohol effects is unknown. Illicit drug use by pregnant women is also underreported, yet hospitals reported 302 drug-affected births in 2004, compared to 258 in 2003 and 222 in 2002. Although maternal smoking during pregnancy puts the newborn at-risk for low birth weight and other problems, 14,083 births among women who smoked were reported in 2004, over 18 percent of the live births [16]. Division of Alcohol and Drug Abuse treatment programs admit pregnant women on a priority basis in accordance with federal requirements. Among the 13,582 women served during fiscal year 2005, 518 were pregnant when admitted to treatment [23]. Clients in CSTAR Women and Children programs had 91 births during their treatment, and 88 of those babies were documented to be born drug-free.

Several communicable diseases, including hepatitis, tuberculosis, and HIV/AIDS are frequently acquired through substance abuse. In 2004, Missouri had 3,150 reported cases of Hepatitis C compared to 3,071 in 2003. Hepatitis B cases have increased substantially, from 135 in 2002 to 339 in 2003 and 529 in 2004 [19]. The total number of HIV cases that have been reported in Mis-

souri increased from 4,526 in 2003 to 4,629 in 2004, an increase of 103 new cases. Cumulative AIDS cases reached 9,810 in 2004, an increase of 186 from the 2003 total of 9,624.

Alcohol, drug, and smoking related deaths are attribution estimates derived from mortality data using ICD-10 codes. Due to the development of a new algorithm for calculating smoking attributable deaths, smoking related death estimates for 2004 and prior years have been revised. Missouri had 9,396 resident deaths attributable to smoking in 2004, a reduction from the 9,537 and 9,503 deaths estimated for 2002 and 2003, respectively [18]. Drug related deaths increased from 561 in 2003 to 591 in 2004, and death attributable to alcohol increased from 328 in 2003 to 383 in 2004 [11].

Alcohol and drug related hospital and emergency room episodes increased in 2004. Alcoholic cirrhosis episodes increased from 3,280 in 2003 to 3,536 in 2004 and all other alcohol related episodes increased from 43,117 to 45,333. Drug related episodes increased from 33,700 in 2003 to 38,606 in 2004 [12, 13, 14].

Public Safety, Law Enforcement, and Corrections

Alcohol related traffic crashes increased from 8,081 in 2003 to 8,301 in 2004. However, fatal crashes attributed to alcohol intoxication declined to 218, compared to 249 in 2003 [33]. The 218 fatal crashes resulted in 252 deaths [36]. There were also 3,692 alcohol related non-fatal injury crashes in 2004, slightly more than the 3,603 recorded in 2003, and these crashes resulted in 5,450 injuries—virtually the same number of alcohol related injuries reported in 2003. Drug related crashes continued to increase and reached 955 in 2004, yet only 17 of these crashes were fatal [34].

Drug arrests and arrests for driving under the influence of alcohol or drugs declined in Missouri in 2004. Arrests for boating while intoxicated increased from 270 in 2003 to 350 in 2004. Law enforcement agencies reported 41,773 drug arrests, compared to 42,839 in 2003. Arrests for the sale or manufacturing of drugs, which reached 8,010 in 2002 before dropping to 7,313 in 2003, declined further to 7,179 in 2004 [30].

The manufacturing of methamphetamine creates an especially hazardous environment. Confiscated methamphetamine labs, chemicals, and equipment are entered into the Clandestine Laboratory Seizure System and reported by the Drug Enforcement Administration's El Paso Information Center [31]. Missouri's methamphetamine lab seizures increased annually until reaching 2,860 in 2003—the most recorded in the United States. The state experienced its first decrease in methamphetamine labs in 2004 with 2,788, and this number continued to decline in 2005 to 2,252. In 2004, there were 34,594 arrests in Missouri for possession of drugs [30].

Probation and parole openings totaled 13,560 for drug offenses and 1,798 for driving while intoxicated, comprising 40.5 percent of all new probation/parole cases [5]. State prison admissions in fiscal year 2005 included 6,846 admissions for drug offenses and 1,082 for driving while intoxicated, constituting 39.4 percent of the total [4].

Fully one-third of all children removed from their homes and separated from their parents in 2004 by juvenile courts were removed due to alcohol and drug abuse by their parents [40]. Out-of-home placements totaled 5,653—251 resulting from parental alcohol abuse, 1,446 caused by parental drug abuse, and 188 from parental alcohol and drug abuse. The portion of placements related to parental substance abuse has been increasing since 2000. Referrals for juvenile alcohol offenses declined to 1,153 in 2004—considerably lower than the recent peak of 1,817 alcohol referrals in 1999. Juvenile court referrals for drug offenses totaled 3,294, the third straight year of decreases after reaching 3,650 in 2001 [41].

TREATMENT NEED

Alcohol and Drug Dependence and Abuse

Criteria for identifying substance dependence and abuse are specified in the *Diagnostic and Statistical Manual of Mental Disorders, 4th Edition*. Based on two years of combined data from the National Survey on Drug Use and Health (NSDUH), an estimated annual average of 10.6 percent of the Missouri population 12 years of age and older was dependent on, or abused, alcohol or illicit drugs during the one-year periods preceding the combined 2003/2004 surveys. This rate was higher than the 9.6 percent reporting dependence or abuse in the 2002/2003 surveys. It was also higher than the national rate of 9.2 percent reported in both two-year periods [52, 53, 55]. Using Missouri's 2003/2004 rates, the NSDUH analysis provides Missouri population estimates (rounded to the nearest thousand) for past month and past year alcohol and illicit drug use, dependence, abuse, and unmet treatment need.

Based on Missouri estimates for dependence and abuse, the state has approximately 499,000 individuals who need treatment for alcohol or illicit drug dependence or abuse. This figure is very similar to the estimate of 491,223 derived from the Missouri treatment needs assessment completed in 2003 by the Research Triangle Institute [42]. Alcohol is the largest component of Missouri's dependence and abuse problem, with a rate of 9.0 percent and a treatment need of 423,000 among adolescents and adults. Illicit drugs comprise a rate of 3.0 percent and a treatment need of 142,000. The separate alcohol and illicit drug rates and estimated numbers total more than the combined rate of 10.6 percent and 499,000 because some individuals are dually dependent on both alcohol and illicit drugs. Therefore, 357,000 need treatment only for alcohol dependence or abuse, 76,000 only for illicit drug dependence or abuse, and 66,000 for both alcohol and illicit drug dependence or abuse. The tables on pages 38 and 39 present the Missouri prevalence rates and population estimates by age group from the 2003/2004 NSDUH.

Missouri's adolescent age group of 12-17 has an alcohol dependence or abuse rate of 7.1 percent and illicit drug dependence or abuse rate of 5.8 percent, with a combined rate of 10.5 percent based on the 2003/2004 surveys. Nationally, the alcohol and illicit drug combined rate for this age group is 8.8 percent. The Missouri rates yield estimates of adolescent treatment need of 51,000, including 23,000 for alcohol dependence or abuse only, 16,000 for illicit drug dependence or abuse only, and 12,000 for both alcohol and illicit drugs.

Among young adults 18-25 years of age, Missouri's dependence/abuse rates are 19.4 percent for alcohol, 8.9 percent for illicit drugs, and 24.0 percent for alcohol and illicit drugs combined, compared to a U.S. combined rate of 21.2 percent. Based on these estimated rates, 155,000 young adults in Missouri need substance abuse treatment—98,000 for alcohol only, 30,000 for illicit drugs only, and 27,000 for both alcohol and illicit drugs.

Adults age 26 and older are more likely than the younger age groups to have a dependence or abuse problem with alcohol only. The alcohol dependence/abuse rate for this population in Missouri is 7.4 percent, the illicit drug rate is 1.6 percent, and the combined rate is 8.2 percent. Among this older adult population nationwide, the dependence/abuse rate for alcohol and illicit drugs is one percentage point lower at 7.2 percent. The Missouri rates indicate that 293,000 Missouri adults older than age 25 need treatment. Of these, 237,000 have only alcohol dependence or abuse, 29,000 have only illicit drug dependence or abuse, and 27,000 have a dependence or abuse problem with alcohol and illicit drugs.

Co-Occurring Mental Health Problems

The NSDUH also examines the relationship between substance abuse and two types of mental health problems—serious psychological distress (SPD) and major depressive episodes (MDE).

Based on the 2004 NSDUH, an estimated 9.9 percent of the United States adult population age 18 and older scored above the criteria threshold for past year SPD, previously referred to as serious mental illness (SMI). The survey also found that an estimated 14.7 percent of the U.S. population age 12 and older had at least one episode of MDE in their lifetime and 8.1 percent had an episode in the past year [54]. The rates of SPD and MDE are much higher for individuals who have substance dependence or abuse problems. Among those meeting the criteria for past year SPD in 2004, 21.3 percent had alcohol or illicit drug dependence or abuse, compared to only 7.9 percent of individuals without SPD. Similarly, 22.0 percent of individuals who had a past year MDE also had substance dependence or abuse, compared to 8.6 percent without a past year MDE. Among the 22 percent with MDE, 16.8 percent had alcohol dependence or abuse and 9.6 percent had illicit drug dependence or abuse. Consistent with these findings, individuals with past year SPD and MDE had higher rates of substance use. Among those with SPD, 9.7 percent reported past month heavy alcohol use, consisting of at least five episodes of binge drinking, while heavy drinking was reported by 7.0 percent of individuals not meeting the criteria for SPD. Past month illicit drug use was much higher at 27.6 percent for those with SPD compared to 11.8 percent without that mental health disorder. Past month cigarette use was also reported by 40.8 percent of individuals with past year SPD but only 24.5 percent of those without SPD. Individuals with past year MDE had higher rates of heavy alcohol use (9.2 percent versus 6.0 percent), illicit drug use (28.8 percent versus 13.8 percent), and cigarette smoking (25.5 percent versus 15.1 percent) than individuals without MDE.

Among U.S. adults 18 years of age and older with past year illicit drug use in 2004, 20.6 percent had past year SPD, while only 8.3 percent without illicit drug use had SPD. Similar relationships exist for substance abuse and MDE. Among individuals 12 years of age or older in the U.S. with past year substance dependence or abuse, 18.5 percent had a past year MDE in 2004. Only 7.0 percent of those without substance dependence or abuse had a past year MDE.

The combined 2003/2004 surveys found that 11.5 percent of Missouri adults had past year SPD, compared to a national rate of 9.6 percent for the same two-year survey period. Missouri's past year SPD rate was 15.5 percent for young adults 18-25 years of age while the national rate was 13.6 percent. Among those 26 years of age and older, 10.7 percent of the Missouri population and 8.9 percent of the U.S. population had past year SPD [53, 55].

UNMET NEED AND TREATMENT ACCESS

Based on the combined 2003 and 2004 results from the National Survey on Drug Use and Health (NSDUH), an annual average of 8.6 percent of the Missouri population 12 years of age and older have an unmet need for treatment of alcohol use and 2.8 percent have an unmet need for treatment of illicit drug use [55]. By comparison, the U.S. population has lower rates, with unmet needs for alcohol treatment and illicit drug treatment of 7.3 percent and 2.7 percent respectively [52]. Using Missouri's 2003/2004 rates, the NSDUH analysis provides population estimates for unmet need rounded to the nearest thousand. In Missouri, an estimated 405,000 adolescents and adults have an unmet need for treatment of alcohol use and 134,000 have an unmet need for drug treatment. Based on the estimates presented in the *Treatment Needs* section above which identified 423,000 needing treatment for alcohol dependence or abuse and 142,000 needing treatment for illicit drug dependence or abuse in Missouri, only 4.3 percent of the individuals needing alcohol treatment and 5.6 percent of those needing drug treatment are accessing services.

Among adolescents 12-17 years of age, an estimated 35,000 need treatment for alcohol dependence or abuse, yet the unmet need is 34,000—a treatment rate of only 2.9 percent. In that same age group, 28,000 have illicit drug dependence or abuse and 26,000 have an unmet need for drug

treatment, resulting in a treatment rate of 7.1 percent for illicit drug dependence/abuse. The treatment rates are similar for young adults 18-25 years of age. Although 125,000 need alcohol treatment and 57,000 need drug treatment, their unmet treatment needs are 121,000 for alcohol and 53,000 for illicit drugs. Thus, they have treatment rates of 3.2 percent for alcohol dependence or abuse and 7.0 percent for illicit drug dependence or abuse. The alcohol treatment rate is somewhat higher for adults 26 years of age and older than for the other age groups, but the illicit drug treatment rate is lower. While 264,000 older adults need treatment for alcohol dependence or abuse, 250,000 have an unmet treatment need—a treatment rate of 5.3 percent. The number needing treatment for illicit drug dependence or abuse is 56,000—with 54,000 untreated, resulting in an illicit drug treatment rate of only 3.6 percent.

Substance abuse disproportionately involves individuals who are unemployed, have low incomes, or lack insurance coverage. According to the 2004 NSDUH, an estimated 9.8 percent of the U.S. population ages 12 and older needed treatment for alcohol or illicit drug use problems, yet only 1.0 percent of this age group received treatment in a facility specializing in substance abuse treatment. Thus, 8.8 percent of the population of adolescents and adults needed—but did not receive—treatment for a substance abuse problem in 2004. Among individuals with an untreated problem, 5.8 percent acknowledged they felt a need for treatment. More than one-third of them reported they unsuccessfully made an effort to get treatment. Cost and lack of health insurance for substance abuse were the treatment barriers most frequently identified by this population [54].

The National Survey of Substance Abuse Treatment Services (N-SSATS) indicates that, among the U.S. population receiving specialty alcohol and drug treatment in 2004, 72.3 percent received their services in publicly supported facilities. In Missouri, 79.3 percent received their services in such facilities in 2004, accounting for most of the individuals served in treatment programs funded by the Division of Alcohol and Drug Abuse [56]. Based on several years of N-SSATS data, the Division has concluded that only 20 percent of the Missouri population needing substance abuse treatment is eligible for private sector treatment, while 80 percent must rely on services supported with public funds. Therefore, the Division's target population is 80 percent of the 499,000 identified in the NSDUH, or approximately 399,200 Missouri residents. In fiscal year 2005, the Division of Alcohol and Drug Abuse provided substance abuse treatment to 35,837—9.0 percent of the individuals needing these services [21].

SERVICES OF THE DIVISION OF ALCOHOL AND DRUG ABUSE

The Division of Alcohol and Drug Abuse (ADA) supports an array of prevention, intervention, and treatment services. In the state fiscal year 2005 (July 1, 2004 through June 30, 2005), ADA contracted with service providers for substance abuse prevention, detoxification, residential and outpatient treatment, compulsive gambling counseling, and traffic offender services. Major funding sources for these programs are federal Substance Abuse Prevention and Treatment block grant funds, targeted federal grants, federal and state Medicaid payments, Missouri general revenue, Compulsive Gambling funds, and Health Initiative funds.

Prevention Services

ADA maintains a comprehensive prevention system based on a risk and protective factor framework. ADA's strategic goals are to delay the onset of drinking and other drug use, reduce binge drinking, and reduce the personal and social consequences of substance abuse. Through contracts with support centers, community-based providers, law enforcement agencies, and coalitions, ADA funds an array of evidence-based programs in public schools and communities. Prevention includes universal services for widespread public education; selective services for groups at high-risk for substance abuse; indicated services for persons with substance use problems that are not yet substance abuse disorders; school-based prevention and intervention services; services to prevent alcohol related neurological disorders; tobacco retailer education activities; and support for enforcing underage drinking laws. ADA partners with other state agencies to provide a coordinated continuum of prevention services across the state.

Treatment, SATOP, Compulsive Gambling, and Housing Services

ADA administers treatment services through contracts with a network of specialized programs. The services are provided to individuals who abuse or are dependent on alcohol or other drugs, to their family members who are adversely affected, and to compulsive gamblers. Individuals served in fiscal year 2005 included those who were already in treatment at the beginning of fiscal year 2005 and those who were admitted during the fiscal year.

In fiscal year 2005, 17,250 individuals were served in Comprehensive Substance Treatment and Rehabilitation (CSTAR) programs, 24,076 in primary recovery programs, and 1,078 in opioid treatment programs (OTPs). The CSTAR model provides intensive outpatient services for specific populations. In fiscal year 2005, CSTAR Women and Children programs served 7,466, CSTAR Adolescent programs served 3,704, and CSTAR General Population programs served 6,067. Compulsive Gambling programs served 350 compulsive gamblers and 66 of their family members [21].

Individuals enter Substance Abuse Traffic Offender Programs (SATOP) following an arrest for driving under the influence of alcohol or other drugs. SATOP served 32,060 individuals in fiscal year 2005 and provided education services to 16,508, Weekend Intervention Program services to 6,745, Clinical Intervention Program services to 4,691, Youth Clinical Intervention Program services to 225, Serious and Repeat Offender Program services to 195, and assessments without additional services to 3,696 [21, 25].

ADA coordinates self-run, self-supported Oxford Houses for clients who have completed treatment and need stable, affordable, drug-free housing to maintain sobriety and enhance recovery. The 47 Oxford houses for men and 12 for women have a capacity of 547 residents.

TREATMENT TRENDS

Admissions

In fiscal year 2005, admissions to Division of Alcohol and Drug Abuse (ADA) programs for substance abuse and dependence treatment totaled 42,726 for eight treatment categories (CSTAR Adolescent, CSTAR Women and Children, CSTAR General Population, Primary Recovery Detoxification, Primary Recovery Treatment, Opioid Treatment, Clinical SATOP, and Other), an increase from the 40,832 admissions recorded in fiscal year 2004 [23]. On pages 54-55 of the statewide admissions—and the data pages for ADA Regions, ADA Service Areas, and the counties—clients are counted once for each of these categories they entered during the year. The 42,726 admissions comprised 36,961 individuals, a 12 percent increase over the 32,969 individuals admitted to programs in fiscal year 2004. Demographic data on these individuals are provided on pages 56-63 and summarized below. There were also 1,735 admissions for codependency and 252 for compulsive gambling.

Gender

A total of 25,474 males and 11,487 females entered ADA programs for substance treatment in fiscal year 2005, compared to 22,663 males and 10,306 females in fiscal year 2004. The number of admissions for pregnant women reached 540, compared to 386 in fiscal year 2004.

Race/Ethnicity

In fiscal year 2005, Caucasians comprised 72.7 percent of the individuals admitted for substance abuse treatment (an increase from 71.6 percent in fiscal year 2004), 25.0 percent were African American compared to 25.8 percent in the previous year, and 2.3 percent were of other races, slightly lower than the 2.6 percent in fiscal year 2004.

Age

The average age of substance abuse treatment clients increased from 33.4 years in fiscal year 2004 to 34.0 in fiscal year 2005. The number of adolescents under age 18 entering treatment remained virtually unchanged at 2,793, compared to 2,795 in fiscal year 2004. There was a 9.6 percent increase in the number of young adults 18-24 years of age admitted to substance abuse treatment programs and a 21.1 percent increase in admissions among individuals 25-29 years of age. Admitted clients in the 30-34 age group increased 11.4 percent, but only 3.6 percent among individuals of ages 35-39. In the 40-44 age group, the number of individuals admitted to treatment increased 10.7 percent. Individuals 45-49 years of age comprised the group with the largest percentage increase in admissions between fiscal years 2004 and 2005—23.6 percent. There were 1,270 clients aged 55 and older entering treatment in fiscal year 2005, an increase of 17.8 percent over the prior year.

Primary Drugs of Abuse

Alcohol continued to be the most prominent drug, with 13,689 individuals admitted for alcoholism treatment in fiscal year 2005 compared to 13,138 in fiscal year 2004. Those admitted to treatment for marijuana abuse increased from 8,666 in fiscal year 2004 to 9,926 in fiscal year 2005. A total of 5,609 clients entering treatment identified cocaine as their primary drug problem, compared to 5,164 in the previous year. Individuals admitted due to methamphetamine increased 33 percent—from 3,480 in fiscal year 2004 to 4,628 in fiscal year 2005—and those admitted for heroin addiction treatment had a 43 percent increase. Only four percent of clients identified any other drug as their primary problem.

YOUTH AND TOBACCO IN MISSOURI

Youth Tobacco Access and Possession Laws

- No Tobacco Sales to Persons under Age 18: Missouri state law prohibits the selling of tobacco products to anyone under the age of 18 years. Merchants are also required to post a state law sign at every tobacco display, including cigarette machines. (*RSMO 407.926-407.927*)
- State Law Enforcement: The Department of Public Safety, Division of Alcohol and Tobacco Control has the authority to enforce the state's laws related to the control and sale of tobacco. (*RSMO 407.934*)
- Vending Machines: As of January 1, 2002, vending machines are required to be located within employee's line of sight or be equipped with a locking device. Vending machines located in areas where patrons must be over the age of 18 or in places not generally accessible to the general public are exempt from this requirement. (*RSMO 407.931*)
- Minor Possession: No person under the age of 18 shall purchase, attempt to purchase, or possess tobacco products unless in the course of employment. Persons under the age of 18 will have their tobacco products confiscated. (*RSMO 407.933*)
- Tobacco Registry: The Department of Revenue is required to establish and maintain a listing of establishments that sell tobacco products in the state. (*RSMO 407.934*)
- Federal Regulation: Federal Synar regulation, administered by the U.S. Department of Health and Human Services, requires all states to establish laws that make it unlawful to sell or distribute tobacco products to any individual under the age of 18 years and to enforce such laws in a manner that can reasonably be expected to reduce youth access to tobacco products. It also requires states to annually measure compliance through random, unannounced inspections. All states are expected to achieve a violation rate of no more than 20 percent. (*42 U.S.C. 300x-26 and 45 C.F.R. 96.130*)

Current Status of Tobacco Use and Merchant Compliance

- Youth Lifetime Use: In 2005, nearly 50 percent of Missouri high school students surveyed reported that they had tried cigarette smoking – down from the 67 percent reporting lifetime use in 2003. The next Missouri Youth Risk Behavior Survey is scheduled for 2007.
- Youth Current Use: In 2005, 26.5 percent of Missouri high school seniors reported current use of cigarettes—slightly higher than the previous year's rate of 21.4 percent yet down significantly from a high of 48.2 percent in 1997. The recent figure for the state is comparable but somewhat higher than that for the country as a whole. The percent of U.S. high school seniors reporting current use of cigarettes was 23.2 percent.

Merchant Compliance: In 2005, an estimated 6.4 percent of Missouri merchants failed to deny cigarettes and/or smokeless tobacco to individuals under the age of 18 years—down from the previous year’s rate of 11.5 percent. For the past six years, the State has realized a non-compliance rate below the long-term Synar target rate of 20 percent. The State has used a combination of law enforcement and merchant education activities in order to bring down the non-compliance rate from a high of 40 percent (baseline year) to a rate less than the 20 percent target rate.

State Initiatives Aimed at Youth Tobacco Access

- **Law Enforcement Surveillance and Inspections:** The Division of Alcohol and Tobacco Control (DATC) has 36 field agents to enforce both alcohol and tobacco laws. Between October 2004 and July 2005, DATC conducted 406 routine inspections, 380 public relations activities, 577 special investigations, and 136 server trainings in which 2,090 individuals were trained. As a result of enforcement activity during this period, 82 citations were issued to clerks and 25 written reprimands were given to store owners.
- **Merchant Education Program:** The Division of Alcohol and Drug Abuse (ADA) continues to conduct a comprehensive merchant education program that includes mailings, educational visits, compliance checks, and feedback to clerks and owners/managers.

In January 2005, ADA printed and distributed 7,500 “age checker” calendars. In addition, educational phone contacts and visits to tobacco outlets were made to provide merchants with information regarding the state’s laws on youth access to tobacco products. An initial phone contact was made in February 2005. From March through June, the prevention teams conducted walk-in visits to tobacco retailers in the state. Retailers generally received two visits during this time period. In total, 10,622 walk-in visits were conducted in which contact was made with the store owner, manager, and/or other employees.

Throughout the year, compliance checks are conducted in which a youth age 16 or 17 attempts to purchase a tobacco product. If the mode of purchase is over-the-counter, the event is considered a successful unconsummated buy if the retail clerk fails to request ID or the age of the youth prior to requesting payment for the tobacco product and fails to refuse the sale. If the mode of purchase is vending machine, the event is considered a successful unconsummated buy if the youth is able to insert a quarter into the vending machine and leave the premises without intervention by store employees whereby they request ID or the age of the youth. During these checks, the youth inspectors purchase no tobacco products. If the check results in a successful (unconsummated) buy, the clerk receives a caution card. The check is followed-up by a caution letter to the owner/manager generally within two weeks of the check. If the store employee refuses the sale, the store employee is given a congratulatory card. These checks are followed up with a congratulatory letter to the owner/manager of the retail establishment. Between August 2004 and July 2005, there were 3,345 checks (including Synar checks), with 253 (7.56%) resulting in the issuance of caution cards.

* Numbers of deaths attributable to alcohol and drugs are not comparable to years prior to 1999 due to ICD-10 implementation which changed rules for selecting and classifying causes of death.

** Smoking related death estimates for all years have been revised from previous report due to changes in estimation methodology.

*** Cumulative HIV cases may show declines from prior years due to their reclassification as AIDS cases.

* Due to implementation of federal Uniform Crime Reporting in 2001, data totals in these categories are not comparable to pre-2001 totals.

** Prior to calendar year 2001, lab seizures were reported by multiple participating law enforcement agencies, resulting in duplicated counts. Beginning in 2001, each lab seizure, chemical or equipment seizure, and dumpsite clean-up are counted once in the National Clandestine Laboratory Seizure System.

Clients are counted once for each type of treatment program (above) that they entered during the fiscal year, and their demographic information is presented on these two pages beginning with GENDER (below). In years prior to the Primary Recovery designation, detoxification and treatment services equivalent or similar to the Primary Recovery services are included in those categories. Clinical SATOP includes Clinical Intervention Program, Youth Clinical Intervention Program, and Serious and Repeat Offender Program. Admissions for non-clinical SATOP, Codependency (significant other), and Compulsive Gambling services listed below are not included in the demo-graphics. Statewide, regional, county, and demographic category totals may not match due to non-inclusive categories, incomplete data, and services to non-residents.

SUBSTANCE ABUSE TRAFFIC OFFENDER PROGRAM (SATOP)

	FY2005	FY2004	FY2003	FY2002

ALCOHOL ADMISSIONS, FISCAL YEAR 2005

13,689 Admissions¹

¹ In these charts, admission records are unduplicated by client I.D. to quantify individuals admitted into ADA substance abuse treatment programs during Fiscal Year 2005 whose primary drug of abuse was Alcohol.

MARIJUANA ADMISSIONS, FISCAL YEAR 2005

9,926 Admissions¹

¹ In these charts, admission records are unduplicated by client I.D. to quantify individuals admitted into ADA substance abuse treatment programs during Fiscal Year 2005 whose primary drug of abuse was Marijuana.

COCAINE ADMISSIONS, FISCAL YEAR 2005

5,609 Admissions¹

¹ In these charts, admission records are unduplicated by client I.D. to quantify individuals admitted into ADA substance abuse treatment programs during Fiscal Year 2005 whose primary drug of abuse was Cocaine.

METHAMPHETAMINE ADMISSIONS, FISCAL YEAR 2005

4,628 Admissions¹

¹ In these charts, admission records are unduplicated by client I.D. to quantify individuals admitted into ADA substance abuse treatment programs during Fiscal Year 2005 whose primary drug of abuse was Methamphetamine.

HEROIN ADMISSIONS, FISCAL YEAR 2005

1,577 Admissions¹

¹ In these charts, admission records are unduplicated by client I.D. to quantify individuals admitted into ADA substance abuse treatment programs during Fiscal Year 2005 whose primary drug of abuse was Heroin.

OTHER DRUG ADMISSIONS, FISCAL YEAR 2005

1,508 Admissions¹

¹ In these charts, admission records are unduplicated by client I.D. to quantify individuals admitted into ADA substance abuse treatment programs during Fiscal Year 2005 whose primary drug of abuse was any drug except alcohol, marijuana, cocaine, methamphetamine, and heroin.

Prison Admissions--Total	2,074	1,770	1,753
Prison Admissions--Drug	926	772	774
Prison Admissions--DWI	2	2	1
Probation/Parole Openings--Total	4,174	3,808	3,583
Probation/Parole Openings--Drug	2,157	1,972	1,827
Probation/Parole Openings--DWI	2	5	6

SCHOOL ATTENDANCE

	2004-2005	2003-2004	2002-2003
Enrollment Grades 9-12	10,132.5	10,396.0	11,030.0
Drop-outs	1,587	1,077	704
Drop-out Rate	15.7%	10.4%	6.4%

* Population estimates for 2001-2004 have been revised by the Census Bureau

** Smoking related death estimate methodology has been revised for all years.

DIVISION OF ALCOHOL AND DRUG ABUSE -- ADMISSIONS DATA

SUBSTANCE ABUSE TREATMENT CATEGORY				SUBSTANCE ABUSE TRAFFIC OFFENDER PROGRAM (SATOP)			
	FY2005	FY2004	FY2003		FY2005	FY2004	FY2003
CSTAR Adolescent	278	263	243	Offender Management Unit	1,109	1,271	1,461
CSTAR Women and Children	1,000	1,026	1,035	-- Alcohol/Drug Education Program	89	219	287
CSTAR General Population	551	597	634	-- Offender Education Program	407	341	393
Primary Recovery Detoxification	565	677	538	-- Weekend Intervention Program	222	232	221
Primary Recovery Treatment	2,017	1,701	1,826	-- CIP, YCIP, SROP	See Clinical SATOP under Treatment Programs at left.		
Opioid Treatment	161	90	47	OTHER SERVICES PROVIDED			
Clinical SATOP	212	201	228	Codependency	304	305	451
Other Substance Abuse Treatment	357	185	153	Compulsive Gambling	21	26	32
Total Substance Abuse Admissions	5,141	4,740	4,704				

Clients are counted once for each type of treatment program (above left) that they entered during the fiscal year, and are described in the data below. Clinical SATOP includes Clinical Intervention Program, Youth Clinical Intervention Program, and Serious and Repeat Offender Program. Admissions for the non-clinical SATOP, Codependency (significant other), and Compulsive Gambling services listed on the right side above are not included. Statewide, regional, county, and demographic category totals may not match due to non-inclusive categories and incomplete data.

GENDER				PRIMARY DRUG PROBLEM			
	FY2005	FY2004	FY2003		FY2005	FY2004	FY2003
